

# FOR ABSOLUTELY SHARP RESULTS

The professional sharpening of knives is an important element in preparing food-stuffs. And no longer just a matter for professionals.

A lot of private households have discovered cooking and developed a need for high-quality cooking utensils. And to every good set of knives belongs a corresponding knife-sharpener.

Whether classic or modern, oval or round, steel, diamond or ceramic - the product diversity of FLÜGEL CSS fulfils (almost) every wish.

This leaflet also includes an interactive DVD containing a portrait of us. You will learn something of our philosophy, our production as well as the products and their professional application.

Easy to remember: placement of a logo in the end cap.

## PREMIUM SYSTEM HANDLE 9800

Our latest product is the 9810 resp. 9811 series. These modern handle-variations are an optically perfect match for a large number of knife series in all different designs. The plastic handle has excellent ergonomics and is extremely robust.

Contrary to the smooth end cap of the 9811 model, the 9810 possesses a movable hanger loop. End pieces and guard plates are made of high-grade zinc diecast in a fine, silver-coloured look.

The 9810 and 9811 handles are available in a large number of variations with different lengths:

- round
- oval

And for very blunt knives:

- diamond coating
- ceramic coating
- full ceramic

In addition, the smooth and well-shaped end cap of the 9811 series is excellently suited for the embossing of a company logo.

# SHARPENING STEEL INNOVATIONS

Our product range is being constantly improved, taking current trends and quality standards into consideration. Every sharpening steel that we make stands out due to the exclusive use of high-quality materials. The result is a very high lifespan and reliability. For example, our standard sharpening steel is

magnetised in order to safely catch the metal particles that fall off during sharpening. Our product range comprises around 1,000 products.

And if the product you require is not included, we can talk about it ...

# SHARPENING SYSTEMS

A large number of lovers of fine knives like to sharpen them on a stone. Our sharpening stones stand for the highest material quality and are available in two versions: 400/1000 and 1000/3000. Suitable for water.

Knife-sharpeners 1000 and 2000: now new with Carborundum addition for a faster sharpening result.

The new knife-sharpener Vulkanus® is even suitable for sharpening blades with a serrated edge.

The unique ceramic knife-sharpener Precision stands for fast, effective and dry sharpening. Easy operation and secure hold also convince users of classic sharpening stones.

## POCKET SHARPENING STEELS

These handy sharpening steels have the identical qualities as their big brothers. Suitable for hunting and penknives, they also enable high-grade sharpening for leisure applications.

## CERAMIC SHARPENING STEELS

Our ceramic sharpening steels have a very lavish finish. The special attachment of the rod in the handle guarantees safe handling.

The ceramics used are optimally geared to current needs: light, durable and with a homogenous structure. Recommended for very blunt knives.

# PERFORMANCE OVERVIEW

### PRODUCT RANGE

We have been producing sharpening systems for over 30 years - one of the world's largest assortments. And many of the leading cutlery manufacturers have been trusting in our quality for years.

### FLEXIBILITY

On examination of our product range, it occurs again and again that customers express special needs. Our flexible production process also leaves enough leeway for special solutions. Do you require another length or a coloured handle, an extended blade protection or special embossing? We are pleased to advise you in more detail in a personal meeting.

### PROGRESS

Our development department is constantly on the lookout for improvements. New materials are regularly checked for their durability. That way, existing and proven systems are also continuously receiving a modification.

### EXCLUSIVENESS

We produce a large number of models exclusively. Besides the pure production, this also includes the logistic administration of the products if required. Our development department is delighted to be at your side in an advisory and supportive capacity from the first idea onwards. The way to your own, exclusive sharpening steel can often be faster and more economical than you think. Take advantage of our experience in this segment as well.

### QUALITY

We guarantee reliable quality from the first to the last produced piece. Our production processes are constantly subject to diverse quality controls. Our laboratory regularly takes samples from day-to-day production. Each product is checked by hand during assembly.

### PRIVATE LABEL

We are pleased to provide our products with an individual logo imprint, also multicoloured. A corresponding stamp in the steel is also possible. Diverse packaging solutions extensively round off the range of offers.
